

Gunnar Schulte is Professor in receptor pharmacology and research group leader for the section Receptor Biology and Signaling at the Department of Physiology and Pharmacology, Karolinska Institutet. He has a background in biochemistry from the Free University in Berlin/Germany and a PhD in molecular pharmacology (supervisor: Bertil B Fredholm) from Karolinska Institutet. As postdoc he trained first with Ernest Arenas (Karolinska Institutet, Molecular Neurobiology) and later with Roger J Summers (Monash University, Melbourne Australia, GPCR pharmacology) before starting his independent research team "Receptor Biology & Signalling". The research focuses on the molecular pharmacology and druggability of class F GPCRs with focus on the ten Frizzleds (FZDs). The projects include classic pharmacological and biophysical approaches, live cell microscopy, structural biology and computational biology to better understand underlying mechanisms of FZD activation. Gunnar Schulte is also the scientific secretary of the Swedish Society for Medical Research (SSMF) and member on the editorial board/editorial advisory board of Molecular Pharmacology, British Journal of Pharmacology, Pharmacological Reviews, and The Journal of Biological Chemistry.
